

# Room Booking

Who	<input type="text" value="enter your name"/>
What	<input type="text" value="enter room name"/>
When	<input type="text" value="date and time"/>
Duration	<input type="text" value="enter desired booking length"/>
Meeting name	<input type="text" value="enter desired booking length"/>
Description	<div>(optional) add a description for your booking</div> <div></div>

SUBMIT

## Exercise 1

Using "vanilla" html, css, js:

1. Create a meeting room booking form
2. Disable the submit button until mandatory fields are filled (see [A](#))
3. Implement validation rules (see [B](#))
4. On submit, make a network request (see [C](#))

A) All fields are mandatory except description.

B) All fields need a minimum of 3 characters. Description has a max of 40 characters.

C) Fire a request to `example.com/book`. It should be a POST request with a body object containing all fields.

## Considerations

- i. Try to write concise and well structured HTML.
- ii. Attempt to write this in such a way that adding a new input to the form is an easy exercise.

## Exercise 2

Repeat exercise 1 using the React framework.
